20MCA131 PROGRAMMING LAB

Lab Report Submitted By

SHEFANY SHANAVAS

Reg. No.:AJC21MCA-2096

In Partial fulfilment for the Award of the Degree Of

MASTER OF COMPUTER APPLICATIONS (2 Year) (MCA)

APJ ABDUL KALAM TECHNOLOGICAL UNIVERSITY

AMAL JYOTHI COLLEGE OF ENGINEERING KANJIRAPPALLY

[Affiliated to APJ Abdul Kalam Technological University, Kerala. Approved by AICTE, Accredited by NAAC with 'A' grade. Koovapally, Kanjirappally, Kottayam, Kerala – 686518]

2021-2022

DEPARTMENT OF COMPUTER APPLICATIONS

AMAL JYOTHI COLLEGE OF ENGINEERING
KANJIRAPPALLY

CERTIFICATE

This is to certify that the lab report, "**20MCA131 PROGRAMMING LAB"** is the bonafide work of **SHEFANY SHANAVAS (Reg. No: AJC21MCA-2096)** in partial fulfillment of the requirements for the award of the Degree of Master of Computer Applications under APJ Abdul Kalam Technological University during the year 2021-22.

Ms. Rini Kurian

Staff In-Charge

CONTENT

18	Find GCD of 2 numbers.	26-11-2021	18
19	From a list of integers, create a list removing even numbers.	26-11-2021	19
20	Program to find the factorial of a number	10-12-2021	20
21	Generate Fibonacci series of N terms	10-12-2021	21
22	Find the sum of all items in a list.	10-12-2021	22
23	Generate a list of four digit numbers in a given range with all their digits even and the number is a perfect square.	10-12-2021	23
24	Display the given pyramid with step number accepted from user.	17-12-2021	24
25	Count the number of characters (character frequency) in a string.	17-12-2021	25
26	Add ‘ing’ at the end of a given string. If it already ends with ‘ing’, then add ‘ly’	17-12-2021	26
27	Accept a list of words and return length of longest word.	17-12-2021	27
28	Construct pattern using nested loop	17-12-2021	28
29	Generate all factors of a number.	17-12-2021	29
30	Write lambda functions to find area of square, rectangle and triangle.	7-01-2022	30
31	Create a package graphics with modules rectangle, circle and sub-package 3D- graphics with modules cuboid and sphere.	7-01-2022	31
32	Create Rectangle class with attributes length and breadth and methods to find area and perimeter. Compare two Rectangle objects by their area.	7-01-2022	33
33	Create a Bank account with members account number, name, type of account and balance. Write constructor and methods to deposit at the bank and withdraw an amount from the bank.	7-01-2022	35
34	Create a class Rectangle with private attributes length and width. Overload ‘<’ operator to compare the area of 2 rectangles.	7-01-2022	37
35	Create a class Time with private attributes hour, minute and second. Overload ‘+’ operator to find sum of 2 time.	7-01-2022	39
36	Create a class for Book Publisher and performance inheritance.	7-01-2022	41
37	Write a Python program to read a file line by line and store it into a list.	28-01-2022	43

38	Program to copy odd lines of one file to other	8-01-2022	44
39	Write a Python program to read each row from a given csv file and print a list of strings.	8-01-2022	45
40	Write a Python program to read specific columns of a given CSV file and print the content of the columns.	8-01-2022	47
41	Write a Python program to write a Python dictionary to a csv file. After writing the CSV file read the CSV file and display the content.	8-01-2022	49

Program no:1

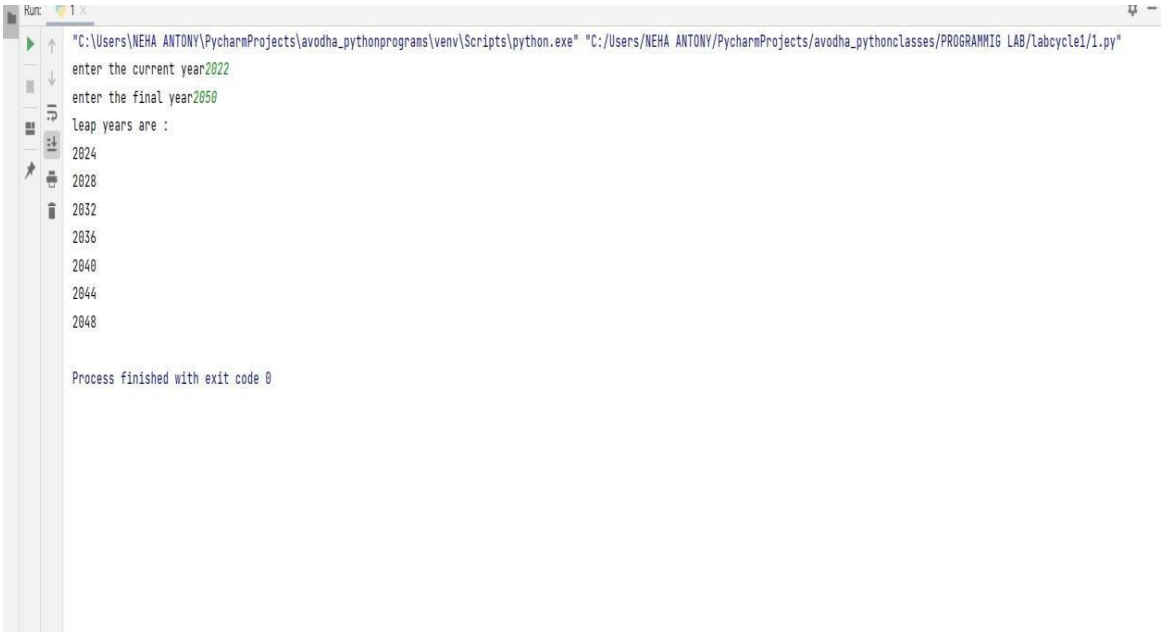
Aim:

Display future leap years from current year to a final year entered by user.

Source Code:

```
c= int(input("enter the current year"))
f= int(input("enter the final year"))
print("leap years are :")
for i in range (c,f) :
    if(i%4==0) and (i%100!=0) or (i%400==0) :
        print(i)
```

Output:



Program no:2

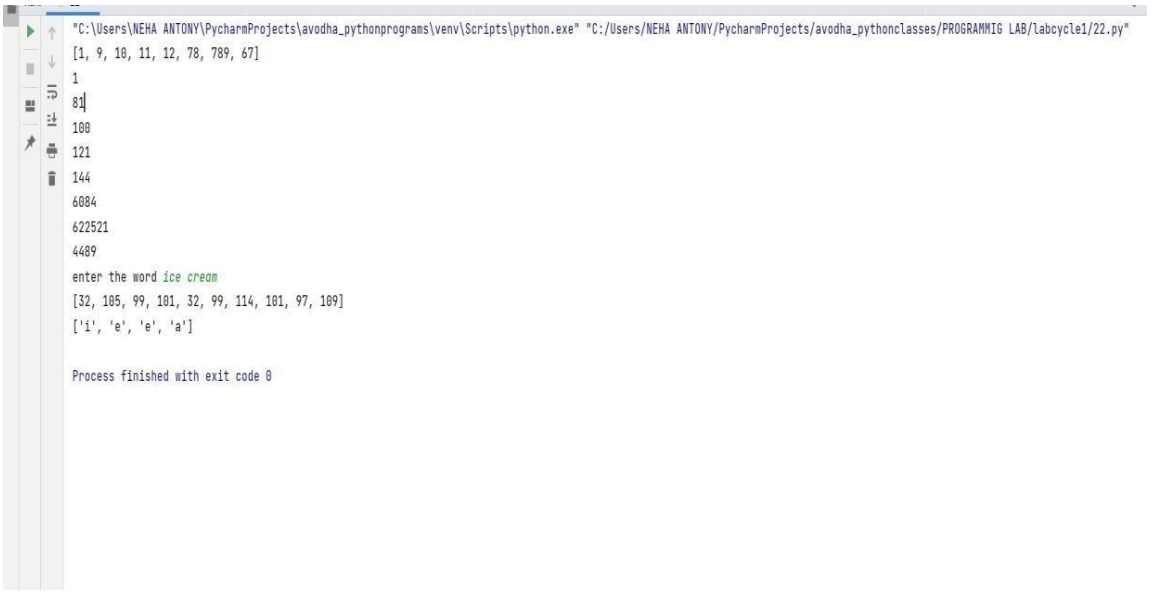
Aim:

List comprehensions:
a. Generate positive list of numbers from a given list of integers
b. Square of N numbers
c. Form a list of vowels selected from a given word
d. List ordinal value of each element of a word (Hint: use ord() to get ordinal values)

Source Code:

```
list1 = [1, 9, 10, 11, -56, 12, 0, 78, -77, 789, -34, 67]
 for i in list1:
       if i <= 0:
           list1.remove(i)
print(list1)
list2=[1,2,90,87,100,102,6,1,4]
for i in list1:
    print (i*i)
word=input("enter the word")
j=[ord(x) for x in word]
print(j)
V=['a','e','i','o','u']
s=[i for i in word if i in V]
print(s)
```

Output:



Program no:3

Aim:

Count the occurrences of each word in a line of text.

Source Code:

```
str1=str(input("enter the string"))
str2=str(input("enter the word "))
x=str1.split()
print(x)
for i in  x :
    if str2 == i :
     c=x.count(i)
print(c)
```

Output:

Program no:4

Aim:

Prompt the user for a list of integers. For all values greater than 100, store ‘over’ instead.

Source Code:

```
n= int(input("enter the numbers of values"))
a=[]
for i in range(0,n):
    c=int(input("enter the value"))
    if c >100:
        a.append("over")
    else:
        a.append(c)
print(a)
```

Output:

Program no:5

Aim:

Store a list of first names. Count the occurrences of ‘a’ within the list

Source Code:

```
list1 =['dency','akshara','shalvin','mridhula','nigi']
c=0
for i in list1:
    if "a" in i:
       c=c+1
print(c)
```

Output:

Program no:6

Aim:

Enter 2 lists of integers. Check:
a. Whether list are of same length
b. whether list sums to same value
c. whether any value occur in both

Source Code:

```
li1=[2,3,4,5,6,7]
li2=[5,6,7,8,10,12]
if len(li1)==len(li2):
    print("a-Length are same\n")
else:
    print("a-lenth are not same")
if sum(li1) == sum(li2):
    print("b-sum are equal")
else:
    print("b-sum are not equal")
j=[x for x in li1 if x in li2]
if j != 0:
    print("c-same elements are",str(j))
else:
    print("c-no elements found")
```

Output:

Program no:7

Aim:

Get a string from an input string where all occurrences of first character replaced with '$', except first character. [eg: onion -> oni$n]

Source Code:

```
a=input("Enter a string")
print(a[0]+a[1:].replace(a[0],"$"))
```

Output:

Program no:8

Aim:

Create a string from given string where first and last characters exchanged. [eg: python -> nythop]

Source Code:

```
str1=str(input("enter the word"))
list1=list(str1)
print(list1)
temp=list1[0]
list1[0]=list1[-1]
list1[-1]=temp
print(list1)
```

Output:

Program no:9

Aim:

Accept the radius from user and find area of circle.

Source Code:

```
from math import pi
r=int(input("enter the radius:"))
print("area of circle=",pi*r*r)
```

Output:

Program no:10

Aim:

Find biggest of 3 numbers entered.

Source Code:

```
a= int(input("enter the fist number"))
b= int(input("enter the second number"))
c=  int(input("enter the third number"))
if (a>=b) and (b>=c):
   print(a,"is greater")
elif (b>=a ) and (b>=c) :
   print(b,"is greater")
else :
   print(c,"is greater")
```

Output:

Program no:11

Aim:

Accept a file name from user and print extension of that.

Source Code:

```
n=input("Enter a filename with extension:")
x=n.split(".")
print("Extension of file name is:",x[-1])
```

Output:

Program no:12

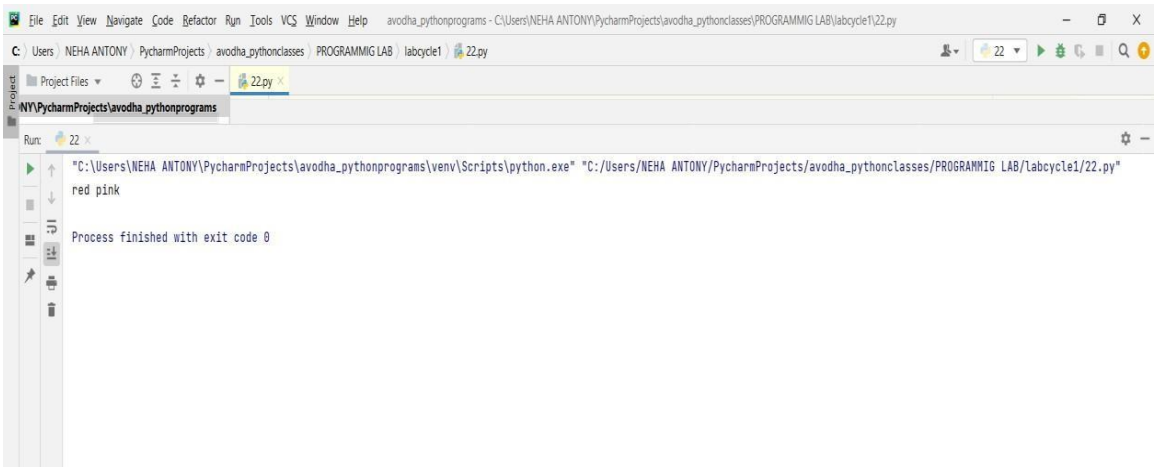
Aim:

Create a list of colors from comma-separated color names entered by user. Display first and last colors.

Source Code:

```
colorlist1=["red","blue","green","yellow","pink"]
print(colorlist1[0],colorlist1[-1])
```

Output:



Program no:13

Aim:

Accept an integer n and compute n+nn+nnn.

Source Code:

```
n = int(input("enter the number"))
print(n+n*n+n*n*n)
```

Output:

Program no:14

Aim:

Print out all colors from color-list1 not contained in color-list2.

Source Code:

```
colorlist1=["red","blue","green"]
colorlist2=["red","blue","pink"]
c1=set(colorlist1)
c2=set(colorlist2)
x=c1.difference(c2)
colorl=list(x)
print(colorl)
```

Output:

Program no:15

Aim:

Create a single string separated with space from two strings by swapping the character at position 1.

Source Code:

```
a=str(input("enter the str1"))
b=str(input("enter the str2"))
print(a.replace(a[0],b[0])+' '+b.replace(b[0],a[0]))
```

Output:

Program no:16

Aim:

Sort dictionary in ascending and descending order.

Source Code:

```
fruits={"apple":5,"orange":7,"watermelon":5,"grapes":4}
l=list(fruits.items())
l.sort()
print(l)
l=list(fruits.items())
l.sort(reverse=True)
print(l)
```

Output:

Program no:17

Aim:

Merge two dictionaries.

Source Code:

```
dict1={1 :"apple",2:"orange",3 : "banana"}
dict2={4 :"plum",5 :"cherry"}
dict1.update(dict2)
print(dict1)
```

Output:

Program no: 18

Aim:

Find gcd of 2 numbers.

Source Code:

```
n1  =  int(input('n1='))
n2= int(input("n2="))
if n1 < n2 :
   small = n1
else :
   small = n2
for i in range (1,small+1):
        if ((n1%i == 0) and (n2%i == 0) ):
            hcf = i

print ("hcf",hcf)
```

Output:

Program no:19

Aim:

From a list of integers, create a list removing even numbers.

Source Code:

```
list1=[1,2,3,4,5,6,7,8,9,10]
for i in  list1:
      if i % 2==0 :
            list1.remove(i)
print(list1)
```

Output:

Program no:20

Aim:

Program to find the factorial of a number

Source Code:

```
n=int(input("Enter the number"))
fact=1
for i in range(1,n+1):
    fact=fact*i
print(n,"!=",fact)
```

Output:

Program no:21

Aim:

Generate Fibonacci series of N terms

Source Code:

```
n=int(input("Enter the number"))
fib=0
print("Fibonacci SERIES:")
for i in range(0,n+1):
    fib=fib+i
    print(fib)
```

Output:

Program no:22

Aim:

Find the sum of all items in a list.

Source Code:

```
a=[32,322,234,46,7,6]
print(sum(a))
```

Output:

Program no:23

Aim:

Generate a list of four digit numbers in a given range with all their digits even and the number is a perfect square.

Source Code:

```
st=int(input("Enter the intial range"))
if(st<1000):
    print("enter a 4 dig num")
    st = int(input("Enter the intial range"))
end=int(input("Enter the End range"))
if(end<st):
    print("Enter a value greater than inital range")
    end = int(input("Enter the End range"))
print("Perfect squares and even numbers in the range"+str(st)+"-"+str(end)+":")
for i in range(st,end):
    if i%2==0 and i**(1/2)==int(i**(1/2)):
        print(i)
```

Output:

Program no:24

Aim:

Display the given pyramid with step number accepted from user.
Eg: N=4
1
2 4
3 6 9
4 8 12 16

Source Code:

```
n=int(input("enter the number"))
for i in range(1,n+1):
    for j in range(1,i+1):
        print(i*j,end=" ")
    print("\n")
```

Output:

Program no:25

Aim:

Count the number of characters (character frequency) in a string.

Source Code:

```
n=input("Enter the string")
a={}
c=0
for i in n:
    for j in n:
        if i == j:
            c=c+1
    a.update({i:c})
    c=0
print(a.items())
```

Output:

Program no:26

Aim:

Add ‘ing’ at the end of a given string. If it already ends with ‘ing’, then add ‘ly’.

Source Code:

```
n=input("Enter a string")
if n[len(n)-3:]!="ing" :
    print(n+"ing")
else:
    print(n+"ly")
```

Output:

Program no:27

Aim:

Accept a list of words and return length of longest word.

Source Code:

```
n=int(input("Enter the no of elements"))
a=[]
for x in range(0,n):
   a.append(input("Enter the word "))
c=0
for i in a:
   if  len(i)>c:
       c=len(i)
       largest=i
print(largest)
```

Output:

Program no:28

Aim:

Construct following pattern using nested loop

```
*
* *
* * *
* * * *
* * *
* *
*
```

Source Code:

```
n=int(input("enter the number"))
for i in range(1,n+1):
    for j in range(1,i+1):
        print("*",end=" ")
    print("\n")
for i in range(n+1,1,-1):
    for j in range(i-1,1,-1):
        print("*",end=" ")
    print("\n")
```

Output:

Program no:29

Aim:

Generate all factors of a number.

Source Code:

```
n=int(input("Enter the number"))
c=[]
for i in range(1,n+1):
    for j in range(1,i+1):
        if i*j==n:
            c.append(i)
            c.append(j)
print("factors of "+str(n)+" :")
for i in c:
    print(i)
```

Output:

Program no:30

Aim:

Write lambda functions to find area of square, rectangle and triangle.

Source Code:

```
print("area of rectangle")
l=int(input("length"))
b=int(input("breadth"))
c=lambda x,y: x*y
print("Area of rectangle:"+str(c(l,b)))
print("area of square")
s=int(input("side of square"))
c=lambda x: x*x
print("Area of Square:"+str(c(s)))
print("area of triangle")
l=int(input("base"))
b=int(input("height"))
c=lambda x,y: .5*x*y
print("Area of Square:"+str(c(l,b)))
```

Output:

Program no:31

Aim:

Create a package graphics with modules rectangle, circle and sub-package 3D-graphics with modules cuboid and sphere. Include methods to find area and perimeter of respective figures in each module. Write programs that finds area and perimeter of figures by different importing statements. (Include selective import of modules and import * statements).

Source Code:

graphpack.py

```
from graphics import circle,rectangle
from graphics.dgraphics import cuboid,sphere
r=int(input("Enter the radius of circle:"))
circle.areac(r)
circle.peric(r)
l=int(input("Enter the length of rectangle:"))
b=int(input("Enter the breadth of rectangle:"))
rectangle.arear(l,b)
rectangle.perir(l,b)
l1=int(input("Enter the length of cuboid:"))
b1=int(input("Enter the breadth of cuboid:"))
h1=int(input("Enter the height of cuboid:"))
cuboid.areacub(l1,b1,h1)
cuboid.pericub(l1,b1,h1)
r1=int(input("Enter the radius of sphere:"))
sphere.areas(r1)
sphere.peris(r1)
```

graphics
circle.py

```
def areac(r):
    a=3.14*r*r
    print("Area of Circle is:",a)
def peric(r):
    p=2*3.14*r
    print("Perimeter of Circle is:",p)
```

rectangle.py

```
def arear(l,b):
    a=l*b
    print("Area of Rectangle is:",a)
def perir(l,b):
    p=2*(l+b)
    print("Area of Rectangle is:",p)
```

dgraphics

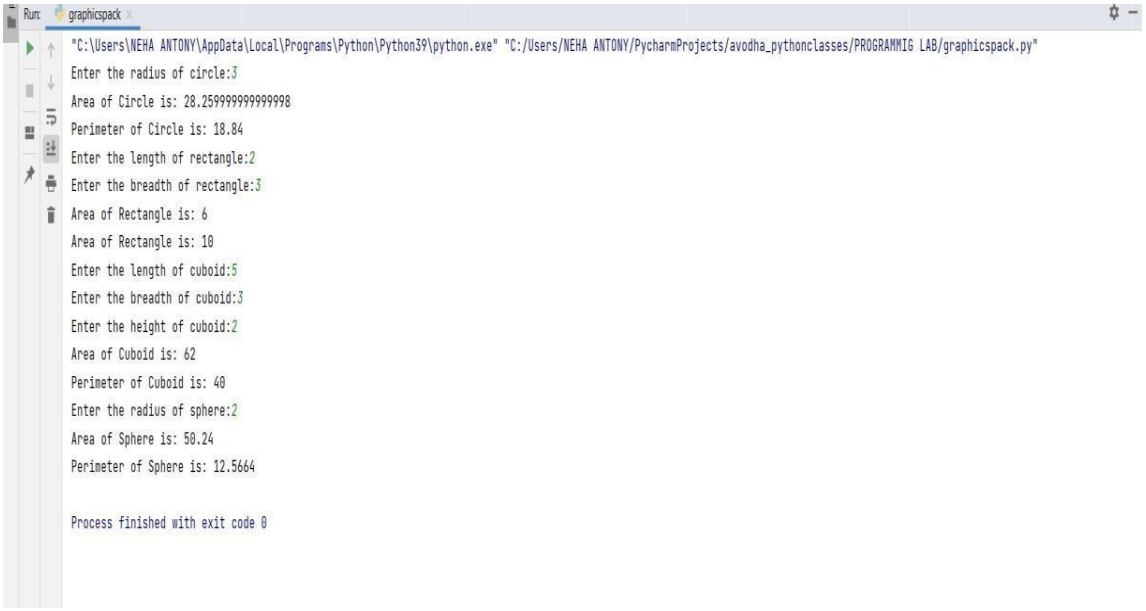
sphere.py

```
def areas(r):
    a = 4*3.14*r*r
    print("Area of Sphere is:", a)
def peris(r):
    p = 6.2832*r
    print("Perimeter of Sphere is:", p)
```

cuboid.py

```
def areacub(l,b,h):
    a = 2*((l*b) + (b*h) + (h*l))
    print("Area of Cuboid is:", a)
def pericub(l,b,h):
    p = 4*(l+b+h)
    print("Perimeter of Cuboid is:", p)
```

Output:



Program no: 32

Aim:

Create Rectangle class with attributes length and breadth and methods to find area and perimeter. Compare two Rectangle objects by their area.

Source Code:

```
class rect:
    def __init_(self,l,b):
        self.a1=l
        self.a2=b
    def area(self):
        self.m=self.a1*self.a2
    def peri(self):
        self.n=2*(self.a1 + self.a2)
    def disp(self):
        print("Area of rectangle:", self.m)
        print("Perimeter of rectangle:", self.n)
    def compare(self,obj2):
        if self.m == obj2.m:
            print("Areas are equal")
        elif self.m > obj2.m:
            print("Area1 is greater than Area2")
        else:
            print("Area2 is greater than Area1")
l1=int(input("Enter length1:"))
b1=int(input("Enter breadth1:"))
l2=int(input("Enter length2:"))
b2=int(input("Enter breadth2:"))
obj1=rect(l1,b1)
obj2=rect(l2,b2)
obj1.area()
obj1.peri()
obj2.area()
obj2.peri()
obj1.disp()
obj2.disp()
obj1.compare(obj2)
```

Output:

Run: 22
"C:\Users\NEHA ANTONY\PycharmProjects\avodha_pythonprograms\venv\Scripts\python.exe" "C:/Users/NEHA ANTONY/PycharmProjects/avodha_pythonclasses/PROGRAMMIG LAB/labcycle1/22.py"
Enter length1:4
Enter breadth1:5
Enter length2:2
Enter breadth2:3
Area of rectangle: 20
Perimeter of rectangle: 18
Area of rectangle: 6
Perimeter of rectangle: 10
Area1 is greater than Area2
Process finished with exit code 0

Program no: 33

Aim:

Create a Bank account with members account number, name, type of account and balance. Write constructor and methods to deposit at the bank and withdraw an amount from the bank.

Source Code:

```
class bank:
    def__init_(self,a,n,t,b):
        self.ac = a
        self.name = n
        self.type = t

Enter the hour in time2:7
Enter the minute in time2:45
Enter the second in time2:10
The sum of both time are:
12 : 41 : 44
Process finished with exit code 0

Program no: 36

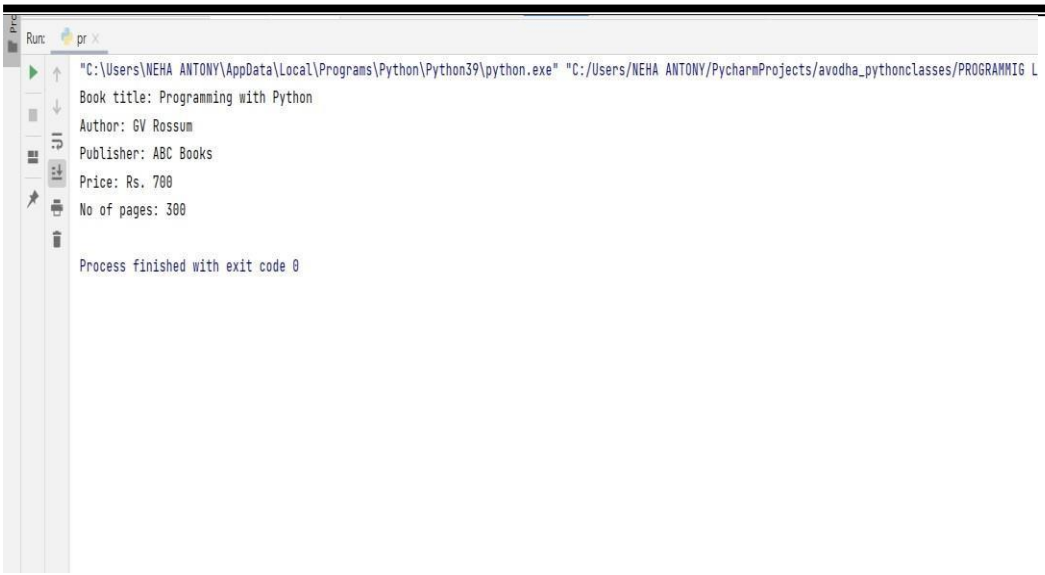
Aim:

Create a class Publisher (name). Derive class Book from Publisher with attributes titleand author. Derive class Python from Book with attributes price and no_of_pages. Write a program that displays information about a Python book. Use base class constructor invocation and method overriding.

Source Code:

```
class Publisher:
 def__init_(self,name1):
   self.name=name1
 def show(self):
  pass
class Book(Publisher):
  def__init_(self,title1,author1,name1):
    self.title=title1
  self.author=author1
  Publisher. init  (self,name1)
  def show(self):
     pass
class Python(Book):
   def__init_(self,p,no,title1,author1,name1):
    self.price=p
    self.no_of_pages=no
    Book._init_(self,title1,author1,name1)
   def show(self):
     print('Book title:',self.title)
     print('Author:',self.author)
     print('Publisher:',self.name)
     print('Price: Rs.',self.price)
     print('No of pages:',self.no_of_pages)
P1=Python(700,300,'Programming with Python','GV Rossum','ABC Books')
P1.show()
```

Output:



Run:
pr
"C:\Users\NEHA ANTONY\AppData\Local\Programs\Python\Python39\python.exe" "C:/Users/NEHA ANTONY/PycharmProjects/avodha_pythonclasses/PROGRAMMIG L
Book title: Programming with Python
Author: GV Rossum
Publisher: ABC Books
Price: Rs. 700
No of pages: 300
Process finished with exit code 0

Program no: 37

Aim:

Write a Python program to read a file line by line and store it into a list.

Source Code:

demo.txt

```
Python
Interpreted high-level language.
Python is object oriented programming language
```

line.py

```
def fread(fname):
    with open(fname) as f:
        c = f.readlines()
    print(c)
fread("demo")
```

Output:

Program no: 38

Aim:

Python program to copy odd lines of one file to other

Source Code:

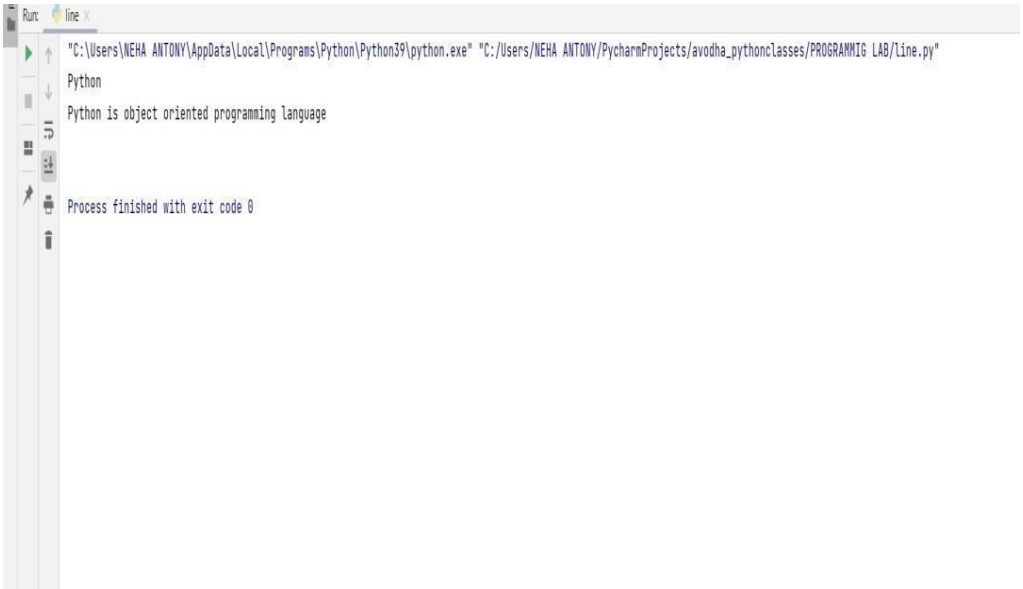
demo.txt

```
Python
Interpreted high-level language.
Python is object oriented programming language
```

line.py

```
a = open("demo", "r")
b = open("t", "w")
c = a.readlines()
d = len(c)
for i in range(0, d):
    if i % 2 == 0:
        b.write(c[i])
    else:
        pass
b.close()
b = open("t", "r")
e = b.read()
print(e)
a.close()
b.close()
-
```

Output:



Program no: 39

Aim: Write a Python program to read each row from a given csv file and print a list of strings.

Source Code:

CSV file
